

What Happens Next?

**Everything That Comes After Setting Up Your
Design System**

Isha Kasliwal (@ikasliwal)

***So, you've set up your team's
first design system...***

Made an **inventory of designs and patterns**

Got **buy-in** from *(at least some)* **stakeholders**

Created a **repository** for people to access your
components and guidelines

What happens next?

As a design system matures, it needs a lot of

Love

in a lot more ways than you might anticipate...

Disclaimer, what I'm about to share are things we did for the Lightning Design System, **so that doesn't necessarily mean they'll work for your system!** I hope that they'll serve as points of inspiration

Areas to focus on as your design system matures:

- ~~Building~~/Maintaining components
- Adoption/Implementation
- Support
- Documentation
- Tooling
- Strategy + Architecture

Building Maintaining *components*

Your focus shifts to **flexibility**

DESIGN GUIDELINES

IMPLEMENTATION NOTES

DEVELOPER GUIDELINES

```
<div class="demo-only" style="padding: 1rem;">
  <div class="slds-progress">
    <ol class="slds-progress_list">
      <li class="slds-progress_item slds-is-active">
        <button class="slds-button slds-progress_marker">
          <span class="slds-assistive-text">Step 1 - Active</span>
        </button>
      </li>
      <li class="slds-progress_item">
        <button class="slds-button slds-progress_marker">
          <span class="slds-assistive-text">Step 2 </span>
        </button>
      </li>
    </ol>
  </div>
</div>
```

Variants

Examples

 In A Modal On A Gray Background

Modifiers

State

 .slds-is-active .slds-is-completed

Ungrouped

 .slds-progress_shade .slds-has-error

States

 Next Step Step Error Tooltip

Adoption/Implementation

Socialize the system to the people you want
consuming it

Office hours & Brown bags

Standards Reviews

Support

Plan your **support strategy** before you need it

- Slack
- Hipchat
- Email
- Chatter (Salesforce internal social service)
- Gus (Salesforce internal work ticketing service)
- Github (both open source + internal)
- Twitter

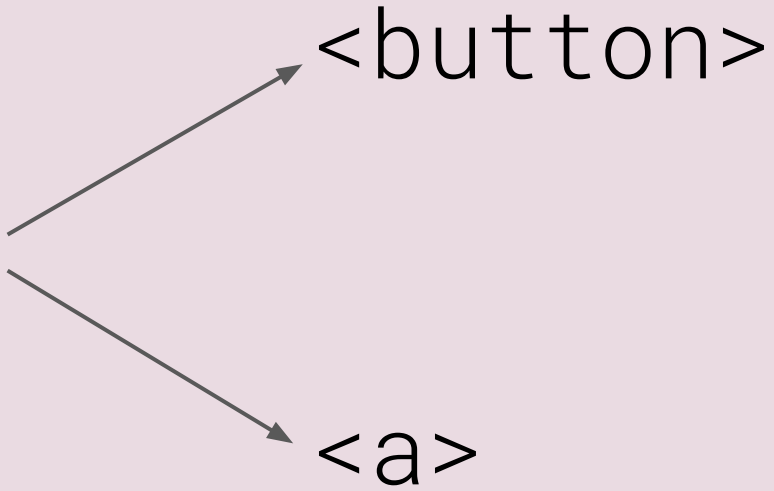

Documentation

When it comes to docs,
there is no “later”

When it comes to docs,
there is no “later”

Try to find a way to make contribution **easy**

Tooling

Select a component

input

Select a utility

Component Metadata

Description	Yes
Summary	Yes
Name	input
Selector	.slds-input
Support	dev-ready
Category	base
Type	data-entry
Layout	responsive

Restriction Tree

- input
 - base
 - [readonly]
 - .slds-input_bare
 - .slds-input_height
 - .slds-input_borders

Examples Component Documentation

export default =>

```

Input Label

default (default) </>

```

export states =>

```

* Input Label

input-required (states) </>

```

```

Input Label

input-disabled (states) </>

```

```

* Input Label

This field is required

input-error (states) </>

```

Strategy + Architecture

Adding **metadata** to each part of our system,
creating a **taxonomy** to classify our system

Our taxonomy includes..

- Pattern
- System
- Category Groups
- Types
- Properties

Establish sound parent-child relationships that will encourage proper usage of patterns and re-usability

Have ~~a clear~~ *somewhat* of a **roadmap**

Shared Governance

Expand beyond just your core team so that **everyone has buy-in**, and everyone feels like they're **contributing**

- **Platform Foundation UX**

Design patterns and Guidelines

- **UX Creative**

Visual Design

- **UX Engineering, Design Systems**

Component patterns and accessibility

***Open question:
Communication?***

What is a good way to **communicate changes** that happen in your design system to ***all* of your users?**

How does your team tackle **communication**
for your design system?

Let me know at [@ikasliwal](#) on Twitter!

Areas to focus on as your design system matures:

- ~~Building~~/Maintaining components
- Adoption/Implementation
- Support
- Documentation
- Tooling
- Strategy + Architecture

Have fun, it's just
the internet

Thank you!
